Enthusiastic, proactive senior web engineer with 11+ years of development, and 7+ years of team leading, public speaking and teaching experience. Architected and led multiple projects, focusing on UX and performance optimization. Mentorship and interviewing experience. Frontend-focused, but recently transitioned to full-stack product engineering role.

Technical Skills:

- Deep expertise in modern frontend ecosystem, including React (9+ yrs), TypeScript (7+ yrs), Cypress, Jest.
- Experience with Node.js, Clojure, SQL, REST APIs. Familiarity with GraphQL, AWS, React Native, Python.
- Advanced hands-on experience with agentic software development using modern LLMs, including Claude Code, Pi, agentic editors, MCP integrations, custom agents, and multi-agent workflows.

EXPERIENCE

Senior Software Engineer @ Metabase

Remote

Feb 2025 – Now

Core team, leading open-source business intelligence platform. I'm a generalist, building product features across the stack — TypeScript/React on the frontend, Clojure on the backend.

Recent projects: monitor (solo project), schema viewer (Metabase's entity-relationship diagram, solo project), custom visualizations, inline data editing in tables, document comments, glossary (solo project). Beyond feature work, I invest in developer experience and product stability across the frontend codebase, and also conduct panel interviews.

Frontend Team/Tech Lead @ Proxet

Kyiv, Ukraine

April 2016 – Jan 2025

I've joined the company as a frontend engineer and was quickly promoted to a team lead, eventually growing into a frontend tech lead position. As a project leader, I've architected and successfully delivered projects of various scale for multiple customers (both small startups and enterprises).

• Frontend Team/Tech Lead/Frontend Engineer

Projects:

- **OneVision**, US (09/2023-01/2025)
- **Concretely.co**, US (06/2023-09/2023)
